

PHC 4th Quarter Earthquake Drill

The Philippine Heart Center employees staged an Earthquake Drill on November 5, 2018 in preparation for the so-called “**Big One**”. The exercise simulated responses during an earthquake, initially with the basic “**duck, cover, and hold**” and followed by building evacuation based on the Evacuation Policy and Guidelines. Several employees participated immediately following the flag-raising ceremony. It was under the auspices of the Incident Management Team and the designated Zone Captains and Assistant Captains who gave their account and documentation of this simulation activity.
